DETAILED ACTION

1. The response of 9/6/2005 was received and considered.

Allowable Subject Matter

2. Claims 1-20 are allowed.
3. The following is an examiner's statement of reasons for allowance:
 - a. Regarding claims 1-10 & 14-19, the prior art relied upon fails to teach or suggest decrypting an encrypted port command containing a client internal IP address, retrieving a client external IP address from a packet header, generating a modified port command including the external IP address and establishing a second channel based on the modified port command, in combination with the other elements of the claim.
 - b. Regarding claims 11-13, the prior art relied upon fails to teach or suggest decrypting an encrypted second peer IP address, retrieving a first IP address from a packet header, generating a modified port command including the first peer address in place of the second peer IP address and using the modified port command to establish a data socket, in combination with the other elements of the claim.
 - c. Regarding claim 20, the prior art relied upon fails to teach or suggest decrypting an encrypted endpoint and modifying the end point by replacing the first portion in the decrypted end point with the public address in the address header of a packet and establishing a data channel using the modified end point, in combination with the other elements of the claim.

a. Regarding claims 1-20, the prior art teaches overriding a client internal IP address/private address/first peer address with a client external IP address/public address/second peer address in the header of a packet, but not the payload (standard network address translation, NAT, see for example Egevang & Borella), replacing a client internal address within an plaintext packet payload using NAT (replaces the internal address with an external address stored in a table), but not explicitly teaching overriding the client internal address with the client external address from the header (Tsuchiya) and encrypting the data payloads of packets (for example Houseley). However, none of the references teach decrypting a payload containing an internal address and overriding the internal address with an external address in a packets header, in combination with the other elements of the claims, as described above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
